

Advanced Atomization Technologies is a joint venture between GE Aviation, the world's largest aerospace engine manufacturer, and Parker Aerospace, a global leader in engine subsystems and components, as well as flight control, hydraulic, fuel, inerting, thermal management, and fluid conveyance systems and technologies. Based in Clyde, New York, Advanced Atomization Technologies designs and produces advanced fuel atomization nozzles for GE Aviation gas turbine aeroengines.

Parker Aerospace is a global leader in the research, design, manufacture, and service of flight control, hydraulic, fuel, inerting, fluid conveyance, pneumatic, and lubrication systems and technologies for aerospace and other high-technology markets. It is an operating segment of Parker Hannifin Corporation.

With annual sales of \$12 billion in fiscal year 2017, Parker Hannifin is the world's leading diversified manufacturer of motion and control technologies and systems, providing precision-engineered solutions for a wide variety of mobile, industrial, and aerospace markets.
